We see different prices all over Australia for cattle panels.

Why is this?

What to look out for?

BRAZZEN, OVER THE YEARS HAS BECOME A DOMINANT PLAYER IN THE LIVESTOCK EQUIPMENT INDUSTRY.

- 1 Many panel weights are very light due to the gauges, the steel rails and posts are very thin. 1.1mm is now becoming the norm in cheap panels now. They dent like an Aluminium can. Brazen Panels are all oval rails 1.5mm thick and the posts are 1.7mm. The standard panels are 36kg in total weight.
- 2 Some cattle panels will have 5 rails instead of 6 rails to save money. This is an old trick.
- 3 Some cattle panels have 60x30mm oval rails and 40x40mm posts.
- 4 Brazen Cattle panels have 70x40mm oval rails and 50x50mm Posts. Many panels go with the half pin cleat instead of the full C cleat. Brazen has the full C cleats on both sides and also has rubber in the cleat holes to stop the rattling noise of the pins.

**BE BRAZEN
BUY BRAZEN**

- 5 Most panels have a very low galvanized coating (Pre-gal) as low as 20grams per square meter of Galvanising. (20gms m²)
- 6 Brazen Posts are Hot Dipped Gal not a coating which is over 200gms m² and the rails are over 60gm
- 7 Brazen also salt tests the welds to make sure they can withstand many hours of salt washing and the welders use splatter rubbers to stop weld splatter on the rails and posts which are hidden from gal paint and can eventually rust.
- 8 All Brazen panels have the Brazen logo on the caps of all the posts.

If you have a farm and would like to make another income we are looking for dealers. Reach out if this is something you are interested in.

Next time you choose a Cattle Panel you need to ask yourself if a Cattle Panel is a Brazen Cattle Panel.

HOW TO RECOGNISE YOU ARE BUYING BRAZEN GENUINE EQUIPMENT

BRAZEN, OVER THE YEARS HAS BECOME A DOMINANT PLAYER IN THE LIVESTOCK EQUIPMENT INDUSTRY.

- 1** We pride ourselves in having excellent galvanising and even our upright posts are hot dipped galvanised on all our panels which is important as this is the part that touches the ground.
- 2** All the gauges/tube wall thickness of our rails and posts are exactly the thickness as stated in our specifications.
- 3** Our workers pride themselves in their welding and you will see the difference with our welding compared with our competitors.
- 4** All our equipment has the anti-rattle rubbers where the pins join the equipment.
- 5** Our standard cattle panels are 36kg in weight, the biggest deception with cheaper panels is the thin steel tube gauge which reflects in the weight of steel.
- 6** Some companies have cheap panels with only half a C clamp on one side to save on steel. When linked with other panels this is much weaker than the full C clamp. Beware of these inferior panels.

"If it is not Genuine Brazen there is no Brazen Warranty"

The factory manufacturing is controlled by Australians and so the quality control and the development are all looked after by Australians. Australia Livestock Equipment is known to be the most robust equipment throughout the world and a lot of Brazen equipment is used in the Northern Territory and the outback where buffalos and wild cattle and horses are penned and captured in Brazen Equipment.

We now have a lot of manufacturers starting to copy our equipment and trying to sell them as Brazen Equipment.

For you to recognise genuine Brazen Equipment, you will see a logo on the cap on the top of the posts on our panels, you will see a Brazen sticker on the panels. A lot of our equipment will have the logo stamped in them.

If you have a farm and would like to make another income we are looking for dealers. Reach out if this is something you are interested in.

Do please keep buying Brazen Equipment and make sure it is genuine.
